## Protection

Protection	description
Input undervoltage protection	When the input voltage is less than $90 \pm 10\%$ Vac, the output power decreases gradually, as detailed in the reduction curve.
Output overload protection	Protection mode: hiccup restart mode, which can be automatically restored after the load abnormal condition is removed.
Output short circuit protection	Hiccup mode, which can be automatically restored after the abnormal condition is removed.
Over-temperature protection	Self-recoverable; when the shell temperature is higher than $90 ^\circ\text{C}$ , the random shell temperature increases and the output power decreases.
Output overvoltage protection	Protection mode: hiccups or clamps in a certain output of the highest voltage state, the product is not damaged, when troubleshooting, the power supply works normally

### Note:

- If not specified, all specification parameters are measured under the condition of 230Vac (50Hz) input, rated load and ambient temperature of  $25 ^\circ\text{C}$ .
- Including setting error, linear adjustment and load adjustment
