# MXG SERIES LED DRIVERS

---

DL-150W-A/P/X-MXG SPEC V1.3

## Features

- Class I structure
- Input voltage: 120-277 V ~ 50/60 Hz
- Efficiency :92%(Typ.)
- Constant power drive and constant current output control mode
- Metal shell structure, protection grade: IP67
- Lightning protection level: differential mode 6kV, common mode 15kV
- Function selection:

Output current is adjusted by external potentiometer (A version only)

Input over-voltage protection ( only P version optional )

Isolated 3 in 1 dimming (X/P version only)

Auxiliary source: 12V/300mA (X version only)

- Lifetime design: 5 years

## Applications

Road lighting、 Industrial lighting、 Venue lighting  
 Floodlight lighting、 Landscape lighting 、 Plant lighting

### Note :

1. Test conditions of the above parameters: Ta=25℃, 230Vac input, full load operation for 30 minutes;
2. When the input is less than 108Vac±10%, the output power gradually decreases. When the input 120-277Vac, rated power150W.  
Please refer to “THE OUTPUT POWER VS INPUT VOLTAGE” curve chart for details.
- 3.P version can be equipped with input over-voltage protection function.

| Multiple time-controlled dimming (optional) | MCU control                 | Set segment dimming function through program                     |      |               | Working mode  |
|   | Timer control               | It is divided into six segments by default and can be customized |      |               | 24H to achieve a cycle  |

**Note:**

1. Output current of dimming port: 100uA (typical value);
2. The X version is 0-10V dimming, and the P version is 1-10V dimming (0V can be turned off). The maximum voltage of the dimming port is 12V. If the external power supply voltage exceeds 12V or the signal cable is inverted, the power supply will be damaged;
3. Dimming default setting is three in one positive logic dimming (programmable software can be set to timing dimming, 0-5V or other voltage dimming);
4. When set to positive logic dimming function, the 0V dimming is turned off, and the output voltage is  $0.46 \cdot V_{omax}$  after the dimming is turned off. Be careful when using this function, but customers are advised to use 1-10V dimming.
5. When setting negative logic dimming, the default output is 100% when the dimming is suspended. Negative logic dimming cannot be turned off. When the port voltage of the dimming is greater than 10.5V, the maximum power output of the power supply will be achieved.

 Output power will decrease gradually when input voltage less than 108Vac±10%;When the input voltage is 90Vac,the output power range is 75W±20%.

## Dimming operation

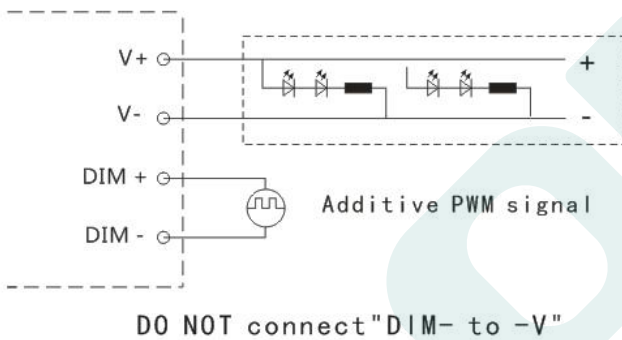

### ※ Three-in-one dimming function (X version only)

- A. Connect a resistor 0-100K or 0-10V DC voltage or 10V PWM signal between DIM+ and DIM- to adjust the output current.
- B. Output current of dimming port: 100uA (typical value).

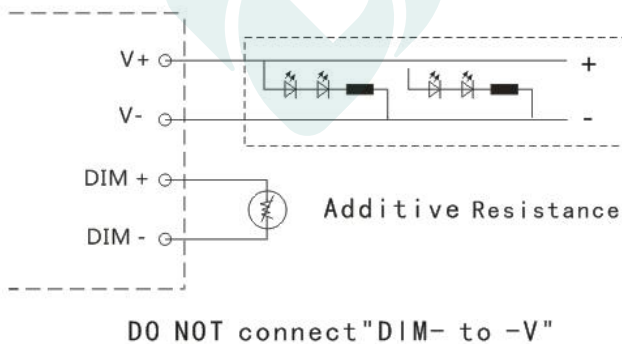

#### ◎ With an applied voltage of 0-10V:

#### ◎ Applying additive 10V PWM signal (Frequency range: 300Hz-2K Hz) :

#### ◎ With an additional 0-100K resistor:

### Note:

1. Positive and negative logic dimming can be programmed.
2. Dimming off only applies to positive logic. For other requirements, please contact technical personnel.

## Packaging

Packaging (mm) L475\*W350\*H160

Note: One Carton 3 layers and 6 pcs each layer, total 18pcs/carton.

### Note:

1. According to the certificate obtained by the LED DRIVER, the LED DRIVER with the English label is sold in Europe, America and India.
2. The LED DRIVER with Chinese label is only used for China market.
